OWNER'S MANUAL

Installation & Directions

Greetings

Congratulations wise and thrifty friend! After 3 years and a million dollars we have developed 2 products that stop water waste, the SHOWERWIZARD and POTTYMISER®. You won't be overpaying on water bills ever again. Today you take back control from the defective toilet manufacturers, overcharging water utilities, careless tenants, wasteful consumers and all the expensive water leaks waiting for plumbers to repair. These people aren't paying the bill **You Are!** Now it's your turn to cut costs and make everyone accountable for their behavior.

I bid you success on your journey and may you enjoy all the great benefits from both the SHOWERWIZARD and POTTYMISER®.

Sincerely,

Miser

Installation

(See diagram for additional detail)

1. With the shower turned off, unscrew the existing shower head.
2. Screw the SHOWERWIZARD valve on to the shower arm. ***Do Not Over Tighten*** or this connection **will** leak.
3. Reattach the shower head to the SHOWERWIZARD valve while holding the valve to prevent it from turning. ***Do not over tighten.***
4. Before testing the SHOWERWIZARD you must activate the device by removing the battery pull tab on the back. As a self test upon activation, the dome will flash: red, green, blue, and the valve will close.
5. Attach the dome assembly to the wall using the included white, adhesive backed Velcro strips. Position the dome assembly left or right of the shower arm, on the exit side of the shower stall.
6. Secure the valves power cable to the shower arm with the included black Velcro wrap(see diagram)
7. Turn the shower on as usual. The SHOWERWIZARD valve will be in the closed position at this point no water will be flowing from the showerhead.
8. Test the installation fully by following the directions for daily use found below.

A few words about the SHOWERWIZARD and its operation:

The SHOWERWIZARD operates on 4 AA batteries which last 12 months under normal use. As the batteries near the end of their life, a triple white flash from inside the SHOWERWIZARD will be noticeable when starting a shower cycle. Seeing the low battery light indication tells you it's time for new batteries. Should the batteries fall below the next preset minimum, the shower will not operate. A white flashing light will be seen until the batteries are replaced.

The SHOWERWIZARD conserves water, eliminates leaks and trains every user to be water conscious. The extra step of activating the SHOWERWIZARD will take water conservation to a higher level. A SHOWERWIZARD shower with a duration of 5 minutes is sufficient with another bonus minute for 6 total minutes. Compared to an average shower this will save at least 3 minutes of time, 6 gallons of water plus the required energy to heat the water. There will be massive savings each year!

Directions for daily use of your SHOWERWIZARD

1. To start, press the dome to activate the SHOWERWIZARD. The dome will start blinking green indicating a shower cycle has started. Turn on the water and shower. You have 5 minutes for your main shower.
2. After 5 minutes the dome will start blinking yellow and the water will pulse, indicating an additional minute of bonus time.
 - ✓ The pause feature will stretch your shower time. To pause, press the dome at any time during the green or yellow cycle for up to a 5 minute pause. While in pause the dome will flash blue.

NOTE: After a 6 minute shower the SHOWERWIZARD will be in lock down mode. The dome will blink red during lock down; only after 5 minutes can a new shower cycle begin for the next person.

NOTE: Never remove the batteries while the SHOWERWIZARD is activated, this will damage the device.

SHOWERWIZARD

Now introducing the POTTYMISER®

You may be interested to learn about our other signature product
The POTTYMISER®.

The POTTYMISER® eliminates toilet leaks and trains every user to be water conscious. The 2 steps of activating the POTTYMISER® and “then flushing” will take water conservation to a higher level. A typical toilet with a medium size leak will waste \$50 to \$200 of water a month depending on the malfunction. On average, 1 in 5 toilets are leaking right now!
